What do stingrays have on their tails?

There are four groups of rays. They have a long, pointed tail. **Skate** has a pointy spine and are the only ones that make eggs. **Eel** can give an electric shock.

**Sawfishes** have a sharp spine.

They breathe through gills.

THE LIFETIME LEARNER  
What kind of investigators work as detectives?

### Uniformed Officers

Officers in uniform may work for the local police department or sheriff's office, the state highway patrol, or the federal border patrol. Among other things, they make sure people follow the law by patrolling their assigned area and responding to service calls.

### Investigators

These law enforcement officers collect and information on...

What are the two places that comets come from?

Comets are made out of ice and dust. They come from the Oort Cloud and the Kuiper Belt. Because they are so far from the Sun, they stay frozen. When they get too close to the Sun, the heat causes the ice to melt and the dust to form a tail. The tail always points away from the Sun.

How long have frogs been on the Earth?

## All About Frogs

### Adaptability

Frogs are considered one of the most adaptable species in the world, since they have roamed the Earth for the past 190 million years. They can survive on land and in water, and there is at least one species of frog virtually anywhere fresh water can be found.

### Response to Environment

Frogs, like all amphibians, are cold-blooded animals, so their body temperature changes as the temperature in their environment changes.

What are the 3 things that connect  
your bones to each other?

## Bones and More Bones

### The Skeletal System

The skeletal system is made up of all the bones in your body. It is also made of the things that connect your bones to each other: tendons, ligaments, and cartilage. The skeletal system also includes one set of hard objects that aren't bones: your teeth! Teeth are actually made of enamel, which is a substance that is even harder than your bones.

#### Skeletal System FUN FACTS!

- The thigh bone is the body's longest bone.
- Babies have more bones than adults.
- The collarbone is the most likely bone to get broken.
- There is only one bone in the body that isn't attached to any other bones: the hyoid bone.
